(57) Abstract:

PROBLEM TO BE SOLVED: To provide the manufacturing method of a curved surface display liquid crystal panel which is capable of obtaining a sense of wide and expansion of design and also capable of increasing the display area without increasing the weight of the panel and to provide the manufacturing method for a liquid crystal display device using the panel.

SOLUTION: The manufacturing method of a curved surface display liquid crystal panel 100 is provided. The manufacturing method of this panel 100 includes a first process forming a liquid crystal display panel 20 having flexibility while including shape holding layers 62 not yet cured but to be cured by ultraviolet rays or heat and a second process curing the shape holding layers 62 by ultraviolet rays or heat while holding the liquid crystal display panel 20 in a desired curved sur-
